# TheModern DataCompany®

At The Modern Data Company, we are radically simplifying today's distributed and decentralized data architectures.

We have productized a data platform that humanizes data and its access, breaks down data silos, and transforms companies as they move toward data democratization and real-time business insights.

DataOS®: The Fastest Path From Data to Decisions

DataOS is a paradigm-changing data operating system that delivers next-gen data and analytics infrastructure as a product. It weaves a connective tissue across distributed data, operationalizing it so users have access to quality, governed, and secure data in real time — DataOS sets teams on the fastest path from data to decisions.

Customer Benefits

Focus on value creation from data instead of integration and process work

Lower OpEx costs by reducing dependency on point solutions and technical resources

Superior data experience helps build data products quickly

True data democratization

DataOS® : A Paradigm Shift

No need to modernize legacy systems

DataOS future-proofs your legacy data infrastructure.

Right to left data engineering

Let business define and drive outcomes by automating pipeline generation.

Data analysis without data movement

Use and find value in data before moving it.

Modern architecture

Build on an open and composable architecture that delivers results in weeks.

The Complete and Composable Modern Data Stack, Out of the Box

Data sharing

Enable seamless, secure, and monitored data collaboration across your business ecosystem without making copies of data

Business ontologies

Allow business users to view data through a business lens that abstracts the schema and formats of underlying data

Data-as-a-product

Convert data into consumable data products with dictionary, schema evolution, lineage, impact, profiling, usage, and quality

Minimal data movement

Data depots let you connect to any data source in minutes and start using the data without moving it

Modern governance

Centralized, attribute-based governance covering the entire data life cycle

Metadata-driven data management

Observability, discoverability, governance, and metadata management across all your data sources
